

30-Day Onsite Clinic Launch

Zero CapEx, Maximum Impact

INDUSTRY

Manufacturing

LOCATION

Texas

EMPLOYEES

350

\$0 CapEx

No upfront investment

47%

Employee registration in first 30 days

The Challenge

Low

Employee engagement

High

ER & urgent care use

Rising

Healthcare costs

ER and urgent-care visits were climbing, total cost of care was rising, and employees were rarely engaging in preventive or primary care. The client needed a solution that would meet workers where they were, increase utilization of the “right” care, and reduce reliance on costly settings - all without shutting down or modifying their high-precision production space.

Traditional Solutions

\$300k

Traditional vendor cost

3-5 months

For typical build-out

High Risk

Operational disruption

The Radish Solution

Radish launched a fully staffed onsite clinic in under 30 days with a complete turnkey model:

\$0 CapEx

No construction, no renovation, no upfront investment required

Rapid Deployment

Launch an onsite clinic in weeks, not months, with minimal internal lift.

Primary Care & Care Navigation

Integrated guidance to high-value, in-network providers for enrolled employees

Zero Disruption

Maintain full production capacity with no construction, renovation, or workflow change.

The Results - First 30 Days

47%

Employee Registration Rate

Nearly half of all eligible employees signed up immediately

1 in 10

Employees Received Care

High utilization in just the first month

-  Most visits replaced unnecessary urgent care or off-site appointments
-  No disruption to production or facilities
-  Implementation required less than 3 hours of HR time

“ It was very convenient and accessible to see a doctor especially when you can’t miss work and it’s located in the workplace.
